

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A method for conferencing, comprising:  
monitoring a status of participants in a conference; and  
transmitting a re-invite signal to any participant that is disconnected from the conference in response to the participant being ~~reconnectable~~reconnectable;  
recording the conference from a disconnect time of any disconnected participant in response to the disconnected participant being disconnected; and  
discontinuing to record the conference and replaying the recording of the conference to the disconnected participant in response to the disconnected participant rejoining the conference.
2. (Original) The method of claim 1, further comprising transmitting the re-invite signal to any participant that exits the conference in response to the participant transmitting a request to rejoin the conference.
3. (Original) The method of claim 1, further comprising adding a participant to a disconnected participant list for each participant that is disconnected from a conference.
4. (Original) The method of claim 3, further comprising:  
monitoring the disconnected participant list;  
recording the conference in response to at least one participant being in the disconnected participant list; and  
discontinuing to record the conference in response to the disconnected participant list being empty.

5. (Canceled)

6. (Original) The method of claim 5, further comprising presenting an interface to control replaying the recording of the conference by the rejoining participant.

7. (Original) The method of claim 5, further comprising removing the rejoining participant from a disconnected participant list in response to completion of replaying the recording of the conference.

8. (Original) The method of claim 5, further comprising determining the disconnect or exit time for each rejoining participant from a timestamp associated with each rejoining participant.

9. (Original) The method of claim 1, further comprising adding each participant to a participant list in response to each participant joining the conference.

10. (Original) The method of claim 9, further comprising removing any participant from the participant list in response to the participant exiting the conference.

11. (Original) The method of claim of claim 1, wherein conferencing comprises at least one of Web-based conferencing, videoconferencing, audio conferencing, teleconferencing, instant messaging and Internet Relay Chat.

12. (Currently Amended) A method for conferencing, comprising:  
monitoring a status of each participant in a conference;  
adding a participant to a disconnected participant list in response to the participant being disconnected; and  
recording the conference in response to at least one participant being in the disconnected participant list;

monitoring the disconnected participant list;  
continuing to record the conference in response to at least one participant being in  
the disconnected participant list;  
discontinuing to record the conference in response to the disconnected participant  
list being empty; and  
replaying a recording of the conference from a disconnect time of a disconnected  
participant to a present time for each participant in the disconnected participant list in response to  
a disconnected participant rejoining the conference.

13. (Canceled)

14. (Original) The method of claim 12, further comprising adding an identification and a timestamp to the disconnected participant list for each participant that is involuntarily disconnected or exits the conference and indicates an intent to return.

15. (Canceled)

16. (Original) The method of claim 15, further comprising presenting an interface to the rejoining participant to control replaying the recording.

17. (Original) The method of claim 15, further comprising removing the rejoining participant from the disconnected participant list in response to completion of replaying the recording of the conference or the disconnected participant skipping replaying the recording.

18. (Original) The method of claim 15, further comprising determining the disconnect time for each rejoining participant from a timestamp associated with each rejoining participant.

19. (Original) The method of claim 12, further comprising transmitting a re-invite signal to any participant on the disconnected participant list in response to the participant being able to rejoin the conference.

20. (Currently Amended) A system for conferencing, comprising:  
at least one server; and  
a conferencing function operable on the at least one server to monitor a status of participants in a ~~conference~~conference;  
means for recording the conference from a disconnect time of any disconnected participant in response to the disconnected participant being disconnected; and  
means for discontinuing to record the conference and replaying the recording of the conference to the disconnected participant in response to the disconnected participant rejoining the conference.

21. (Canceled)

22. (Original) The system of claim 20, further comprising a participant list to store an identification of each participant in the conference.

23. (Original) The system of claim 20, further comprising a disconnected participant list to store an identification associated with each participant that is disconnected from the conference.

24. (Original) The system of claim 23, further comprising:  
means for monitoring the disconnected participant list;  
means for continuing to record the conference in response to at least one participant being in the disconnected participant list; and  
means for discontinuing to record the conference in response to the disconnected participant list being empty.

25. (Original) The system of claim 24, means for replaying a recording of the conference from a disconnect or exit time to a present time for each participant in the disconnected participant list in response to a rejoining participant rejoining the conference.

26. (Original) The system of claim 25, further comprising an interface presentable to the rejoining participant to control replaying the recording.

27. (Original) The system of claim 25, further comprising means for removing the rejoining participant from the disconnected participant list in response to completion of replaying the recording of the conference.

28. (Original) The system of claim 20, further comprising means for transmitting a re-invite signal to any disconnected participant in response to the disconnected participant being able to rejoin the conference.

29. (Currently Amended) A method for making a system for conferencing, comprising:  
    providing at least one server; and  
    providing a conference function operable on the at least one server to monitor a status of participants in a conference  
    providing means to record the conference in response to at least one participant being disconnected from the conference; and  
    providing means for replaying a recording of the conference from a disconnect time to a current time for each participant disconnected in response to a disconnected participant rejoining the conference.

30. (Canceled)

31. (Currently Amended) The method of ~~claim 29~~claim 30, further comprising forming a disconnected participant list to store an identification associated with each participant that is disconnected from the conference.

32. (Original) The method of claim 31, further comprising:  
    providing means for monitoring the disconnected participant list;  
    providing means for continuing to record the conference in response to at least one participant being in the disconnected participant list; and  
    providing means for discontinuing to record the conference in response to the disconnected participant list being empty.

33. (Original) The method of claim 32, further comprising providing means for replaying a recording of the conference from a disconnect time to a present time for each participant in the disconnected participant list in response to a rejoining participant rejoining the conference.

34. (Original) The method of claim 33, further comprising providing means for forming an interface presentable to the rejoining participant to control replaying the recording.

35. (Original) The method of claim 33, further comprising providing means for removing the rejoining participant from the disconnected participant list in response to completion of replaying the recording of the conference.

36. (Original) The method of claim 29, further comprising providing means for transmitting a re-invite signal to any disconnected participant being able to rejoin the conference.

37. (Currently Amended) A computer-readable medium comprising one from the group consisting of an electronic medium, a magnetic medium, a semiconductor medium, having

computer-executable instructions stored therein, the instructions when executed causing a processing device to perform:~~for performing a method, comprising:~~

monitoring a status of participants in a conference; and  
transmitting a re-invite signal to any participant that is disconnected from the conference in response to the participant being able to rejoin the ~~conference~~conference;  
recording the conference from a disconnect time of any disconnected participant in response to the disconnected participant being disconnected; and  
discontinuing to record the conference and replaying the recording of the conference to the disconnected participant in response to the disconnected participant rejoining the conference.

38. (Original) The computer-readable medium having computer executable instructions for performing the method of claim 37, further comprising adding a participant to a disconnected participant list for each participant that is disconnected from the conference.

39. (Original) The computer-readable medium having computer executable instructions for performing the method of claim 38, further comprising:

monitoring the disconnected participant list;  
recording the conference in response to at least one participant being in the disconnected participant list; and  
discontinuing to record the conference in response to the disconnected participant list being empty.

40. (Original) The computer-readable medium having computer executable instructions for performing the method of claim 39, further comprising replaying a recording of the conference in response to a disconnected participant rejoining the conference.

41. (Original) The computer-readable medium having computer executable instructions for performing the method of claim 40, further comprising presenting an interface to control replaying the recording of the conference by a rejoining participant.

42. (Original) The computer-readable medium having computer executable instructions for performing the method of claim 40, further comprising removing the rejoining participant from the disconnected participant list in response to completion of replaying the recording of the conference.

43. (Original) The computer-readable medium having computer executable instructions for performing the method of claim 37, further comprising adding each participant to a participant list in response to each participant joining the conference.

44. (Original) The computer-readable medium having computer executable instructions for performing the method of claim 43, further comprising removing any participant from the participant list in response to the participant exiting the conference without an indication of returning.
